

## **ScanApp Release Notes – Release 1.0**

ScanApp is designed using WPF MVVM pattern on .NET 8. Data such a document name which are required for all sessions are saved in a text file.

### **Home page**

- The UI is designed for displaying only “Import image” in scanner list.
- Username and scanned image location are saved for current session only.
- Only when username and image location are non-empty, the save button will be enabled and user can proceed with scanning.

### **Scan Page**

- User can select any existing image. Image will be loaded on the UI.
- On the loaded image, user can draw zone, magnify, pan, zoom-in, zoom-out and fit the image to the window.
- If multiple images are selected, user can navigate to each image using “Next” and “Back” buttons
- The image information of current loaded image will be displayed

### **Scanned Document Page**

- All the scanned documents from the specified scanned image location will be listed.
- Document deletion is implemented.
